Subjects

(*L*) denotes letter to the Editor,
(*N*) short note,
(*R*) conference or exhibition report.

Animal navigation, Motional e.m.f. and *221*
Apparatus for physics teaching, Newer *322(N)*, *404–426*
APPIL *335*
Assessment *260(N)*
Assessment of practical work in sixth-form physics, Teacher-based *364*
Astronomy
  Astronomy and geophysics *260(N)*
  Astrophysics and astronomy at QMC *135*
  Celestial navigation with the stereographic projection *251*
  Spherical projections in teaching astronomy *58*
Atomic physics
  A simple model of a metal–nonmetal transition *318*
  Atoms in the secondary school *9(L)*
  Crystal models, Construction of *246*
  Crystallography, Two-dimensional *104*
  Illustrating atomic movements in solids *114*
  Phonons, atoms and waves *233*
  The Kelvin–Thomson atom *326, 370*
  The scattering of gas atoms from solid surfaces *238*
Audio-visual
  BBC films *237(N)*
  Film production *325(N)*
  Simulation of centrifugal forces on an OHP *38*
  Simulation of Coriolis forces on an OHP *106*
Avogadro constant, Confusion over *273(L)*, *401(L)*

BBC films *237(N)*
Bernoulli's theorem, A misinterpretation of *311*
BISFA film festival *393(R)*
Book prices *337(L)*
Book reviews *62, 82, 267, 329, 394, 457*
Books for practical physics *419*
Brain teaser *81, 212, 284, 402(L)*

Careers *19(N), 65(R), 140–5*
Centrifugal forces on an OHP, Simulation of *38*
Chart recorders for schools, A review of *404*
Climatologist of the future *143*
Colour physics, Demonstrations in *121*
Comprehensive schools, Physics in *54*
Computers
  CAL in physics—other approaches *83*
  Computers in higher education *423(N)*
  Developing CAL for undergraduate science teaching *48*
  Teaching projectile motion using an electronic analogue *230*
Conference attendance amongst teachers *205*
Conferences and courses *64, 128, 268, 332, 396, 460*
Coriolis effect, A quantitative demonstration of *117*
Coriolis forces on an OHP, Simulation of *106*
Crystal models, Construction of *246*
Crystallography, Two-dimensional *104*
Curriculum development in science *263(N)*
Curriculum work at IPN, Kiel *32*

D.c. amplifiers and their use in schools *414*
Developing countries, Physics teaching in *334(R)*
Dielectric constant of liquids, Measurement of *40*, *322(N)*
Digital instruments, Multifunctional *414*

Ear, Physics and the *313*
Editorial *65, 129*
Education
  A hybrid learning scheme *3*
  Advanced Physics Project for Independent Learning *335*
  Assessment *260(N), 364*
  Changes in physics teaching *1*

Computer assisted learning *48, 83*
Curriculum development in science *263(N)*
European studies degree course *270*
Examinations in physics *5(N), 12–32, 208(L), 401(L)*
Germany, Physics teaching in *398*
Helping or spoonfeeding? *206*
Improving a Keller plan course *87*
N and F levels *363(N)*
Nuffield A-level physics *237(N)*
PGCE graduates *269*
Physics courses in higher education *147–200*
Physics curriculum work at IPN, Kiel *32*
Physics in comprehensive schools *54*
Physics teaching in developing countries *334(R)*
Schools physics for the 1980s *1(R)*
Self-paced study, When to use *398*
Syndicate studies for the systems and management degree *217*
The great debate *205, 333*
The interface between school and university *304*
Tomorrow's teachers *397*
Undergraduate science, Students' reactions to *403(N)*
Electronics
D.c. amplifiers and their use in schools *414*
Electrical connections—Saving space and cost *247*
Electronics O-level *271(N)*
Electronics summer school *61(N)*
Keller plan course in digital electronics *87*
Measurement of the dielectric constant of some liquids *40, 322(N)*
Motional e.m.f. and animal navigation *221*
Multifunctional digital instruments *411*
Narrow-band model *211(L)*
Relativistic trajectories in electric fields *46*
Teaching projectile motion using an electronic analogue *229*
Thermoelectric effects and contact potentials *374*
Vibrations to waves *224*
Energy resources *29(N), 97, 380(N), 389(N)*
Error estimation *261, 402(L)*
European studies degree course *269*
Examinations in physics *5(N), 12–32, 208(L), 401(L)*

Field course in the Lake District, A physics *296*
Film production *325(N)*
Film reviews *124, 267, 328, 393*
Fraunhofer, Fun with *213*
Frontiers of physics *270(R)*
Future of physics *75*

Germany, Physics teaching in *398*
Graduating physicists' conference *65(R)*
Gravitation
Gravitation as Newton first saw it *347*
Simple gravitation using a programmable pocket calculator *360*
Teaching projectile motion *229*

Heat
Fluid properties near the critical point *244*
Misconceptions in school thermodynamics *248*
Teaching temperature *6(L)*
The variation of viscosity with temperature *323*
Thermoelectric effects and contact potentials *374*
Hertz, Using the *338(L)*
History of physics
A Newtonian miscellany *340*
Gravitation as Newton first saw it *347*
Isaac Newton—250th anniversary *339*
Newton, particles and concepts of force *351*
Newton's telescope *354*
Resources for Newtonian studies *356*
Teaching natural philosophy 175 years ago *427*
The early scientific instrument makers *92*
The Kelvin–Thomson atom *326, 370*

Industry, Science in schools and *339(N)*
Instrument makers, The early scientific *92*
Interactions of matter, The fundamental *452*
Interface between school and university, The *304*
Interference effects *273(L)*
Interference effects, Multiple-beam *38*
Interference fringes from a mirror *436*
Interference fringes, White-light *209(L)*
Institute of Physics membership rules *271*

JMB physics papers 1951–1976 *20*

Keller plan course, Improving a *87*
Kinetic theory
Amount of substance and the mole *276, 402(L)*
Avogadro constant, Confusion over *273(L), 401(L)*
Introduction to the mole in the teaching of ideal and real gases *279*
The forbidden volume of a gas *240*
The mole in physical science teaching *272(N)*
The place and importance of the mole in school chemistry courses *285*
The scattering of gas atoms from solid surfaces *238*

Laboratory, Role of the *336(N)*
Leader *1, 205, 269, 333, 397*
Letters *6, 67, 208, 273, 337, 400*
Library instruction, A role for the academic in *432*

Library instruction materials bank *399*
London A-level physics syllabus, The new *27*

Magnetic traces, Observing *320*
Mathematics, A new naturalistic style of *257*
Matter and mass *67(L)*
Measurement techniques *312(N)*
Mechanics
  A problem in relative motion *255, 403(L)*
  A quantitative demonstration of the Coriolis effect *117*
  Astrodynamics *445*
  Development of physics concepts under zero-gravity conditions *441*
  Mechanical resonance of a one-dimensional oscillator *105*
  Newton, particles and concepts of force *351*
  Rubber elasticity *10(L)*
  Simulation of centrifugal forces on an OHP *38*
  Simulation of Coriolis forces on an OHP *106*
  Teaching projectile motion *229*
  The physics of a controversial goal *43*
  The romance of space *438*
  Tribology *140*
  Vibrations of machinery *7(L)*
  Vibrations to waves *224*
Mnemonics in mathematics and physics *385*
Mole, Amount of substance and the *276, 402(L)*
Mole in school chemistry courses, The *285*
Mole in the teaching of ideal and real gases, The *279*
Multiple-choice questions, An item bank for *263*

Natural philosophy 175 years ago *427*
News and comment *1, 65, 205, 269, 334, 398*
Newton—250th anniversary *339*
Newton and concepts of force *351*
Newton and gravity *347*
Newtonian miscellany, A *340*
Newtonian studies, Resources for *356*
Newton's telescope *354*
Nightingale E: Appreciation *399*
Nomograms in physics courses *108*
Notes on experiments *38, 104, 244, 318, 434*
Nuclear power, Aspects of *389(N)*
Nuffield A-level physics *237(N)*
Nuffield A-level physics examination *12*
Nuffield O-level examining *16*
Nuffield view of physics *70*

O-level physics reborn *73*
Objective tests, Constructing *24*
Open University *335*
Optics
  A modular optical teaching system *434*
  Demonstration of multiple-beam interference effects *39*
  Demonstrations in colour physics *121*
  Fun with Fraunhofer *213*
  Geometrical optics in schools *209(L)*
  Interference effects *273(L)*
  Interference fringes from a mirror *436*
  Newton's telescope *354*
  Stereoscopy *67(L), 338(L)*
  White-light fringes *209(L)*
Oscillator, Mechanical resonance of a one-dimensional *105*
Osmosis *273(L)*

Particle physics, The fundamental interactions of matter *452*
Perpetual motion *402(L)*
Phonons, atoms and waves *233*
Photoelectricity
  Using the hertz *338(L)*
Physical constants and SI base units *289*
Physics apparatus *11, 212, 295, 433*
Physics Interface Project *304*
Physics of a controversial goal *43*
Pocket calculator, Simple gravitation using a programmable *360*
Practical physics
  A 'do-it-yourself' demonstration laboratory *389*
  A review of chart recorders for schools *404*
  D.c. amplifiers and their use in schools *414*
  Laboratory safety *303(N)*
  Multifunctional digital instruments *411*
  Newer apparatus for physics teaching *322(N)*
  Nomograms in physics courses *108*
  Role of the laboratory *336(N)*
  Some books for practical physics *419*
  Teacher-based assessment of practical work in sixth-form physics *364*
  The use of quartiles in teaching error estimation *261*
Probability distribution, Electron *400(L)*
Profiles in examinations *29*
Project New Man *207*
Projects
  A physics field course in the Lake District *296*
  Experiments on water drop interactions *381*
  Research in schools *66*
  Syndicate studies for the systems and management degree *217*
Psychology of learning
  Misconceptions in school thermodynamics *248*
  The use of mnemonics in mathematics and physics *385*

Quantum physics
  Atoms in the secondary school *9(L)*
  Numerical solution of the Schrödinger equation for a quantum harmonic oscillator *387*
  Phonons, atoms and waves *233*
  Probability distribution, Electron *400(L)*
Quartiles in teaching error estimation, The use of

261, 402(L)
Queries in physics *37, 87, 254, 275, 338, 410*

Relative motion, A problem in *255, 403(L)*
Relativity
A relativistic paradox *103, 337(L)*
Relativistic trajectories in homogeneous electric fields *46*
Relativity and rockets *8(L)*
Reprints *336*
Research frontier, At the *68, 270(R)*
Research in schools *66*
Rubber elasticity *10(L)*

Safety in laboratories *303(N)*
Seismic-ray tracing *210(L)*
Self-paced study, When to use *398*
Short courses at Salford University *32(N)*
SI base units, Fundamental physical constants and the *289*
Society and physics
Energy for mankind *97*
Physics and physicists *19(N)*
Promoting physics *66(R)*
Science in schools and industry *338(N)*
Social responsibility essay competition *2(N)*
What is physics? *65, 68–81*
Sound
Physics and the ear *313*
Space
Astrodynamics *445*
Development of physics concepts under zero-gravity conditions *441*
The romance of space *438*
Spherical projections in teaching astronomy *58*
Stamps, Physics on *52*
Stereoscopy *67(L), 338(L)*
Stokes' law revisited *300*
Subscription, Members' rate *5(N)*
Syndicate studies for the systems and management degree *217*

Technology modules *16(N)*
Tertiary education booklets *81(N)*
Textbooks *113(N)*
Thermoelectric effects and contact potentials *374*
Tides *274(L)*
Tribology *140*

Vibrations of machinery *7(L)*
Vibrations to waves *224*
Viscosity, Stokes' law revisited *300*
Viscosity with temperature, The variation of *323*

Water drop interactions, Experiments on *381*
What is physics? *65, 68–81*

Young people's lectures *426(N)*

Authors with titles

(*L*) denotes letter to the Editor,
(*N*) short note,
(*R*) conference or exhibition report.

Allsop R T: The place and importance of the mole in school chemistry courses *285*
Appleton A: Demonstration of multiple-beam interference effects *39*
Armstrong H L: A relativistic paradox *103, 337(L)*
Armstrong H L: Perpetual motion *402(L)*

Bailey A E: The Avogadro constant *401(L)*
Baldy R: see Gauthier J P
Barritt K D: Using the Hertz *338(L)*
Bastin J: Astrophysics and astronomy at Queen Mary College *135*
Bausor J: APPIL for the student *335*
Beare R and New P J: Programmable calculators for elementary physics teaching *424*
Bedford D and Lindsay R: A misinterpretation of Bernoulli's theorem *311*
Bishop G D: The early scientific instrument makers *92*
Black P J: Examinations in physics *209(L)*
Black P J and Ogborn J M: The Nuffield A-level physics examination *12*
Boag T R: Amount of substance and the mole *402(L)*
Brown L M: A simple model of a metal–nonmetal transition *318*
Brown L M: The use of quartiles in teaching error estimation *261*

Contents of volume 12

January 1977

The Nuffield A-level physics examination: P J BLACK and J M OGBORN *12*
Nuffield O-level examining: JOHN L LEWIS *16*
JMB physics papers 1951–1976: R M LEE *20*
Constructing objective tests: G M FORREST *24*
The new London A-level physics syllabus: R E DIMES and P HECKER *27*
Profiles in examinations: R W FAIRBROTHER *29*
Physics curriculum work at the IPN, Kiel: WALTER WESTPHAL *32*
The physics of a controversial goal: J R PRESCOTT *43*
Relativistic trajectories in homogeneous electric fields: JORN LYNGESEN *46*
Developing CAL for undergraduate science teaching: ALLAN CREASE *48*
Physics on stamps: Appendix VII: E J BURGE *52*
Physics in comprehensive schools: SHEILA SAVILLE and BRIAN WOOLNOUGH *54*
Spherical projections in teaching astronomy: D R HUTTON *58*
Leader, News and comment *1* Letters *6* Physics apparatus *11* Queries in physics *37* Notes on experiments *38* Book reviews *62* Forthcoming conferences and courses *64*

March 1977

At the research frontier: J M ZIMAN *68*
A Nuffield view of physics: JOHN L LEWIS *70*
O-level physics reborn: DENYS GASKELL *73*
The changing face of physics: H LIPSON *75*
A question of choice: MAURICE EBISON *78*
CAL in physics—other approaches: TERRY HINTON *83*
Improving a Keller plan course: E R DAVIES *87*
The early scientific instrument makers: G D BISHOP *92*
Energy for mankind: L PINCHERLE and P RICE-EVANS *97*
A relativistic paradox: H L ARMSTRONG *103*
Nomograms in physics courses? C JAMES *108*
Illustrating atomic movements in solids: E R TURPIN *114*
A quantitative demonstration of the Coriolis effect: I S T TSONG, C A CORNELIUS and D J KAROLY *117*
Demonstrations in colour physics: S J EDWARDS *121*
Editorial, News and comment *65* Letters *67* Book reviews *82* Queries in physics *87* Notes on experiments *104* Film reviews *124* Forthcoming conferences and courses *128*

April 1977

Editorial: R SCHOFIELD *129*
Introduction *131*
Astrophysics and astronomy at Queen Mary College: JOHN BASTIN *135*
Tribology: T F J QUINN *140*
Climatologist of the future: H T MOERTH *143*
After the sixth form: W G MENDS and D PROCTOR *144*
Courses in physics in England, Wales and Northern Ireland *147*
Courses in physics in Scotland *195*
Index *202*

May 1977

Fun with Fraunhofer: T W EATON *213*
Syndicate studies for the systems and management degree: J NEWTON and A H SEVILLE *217*
Motional e.m.f. and animal navigation: A M ROBERTS *221*
Vibrations to waves: WINIFRED SILLITTO *224*
Teaching projectile motion: M K SUMMERS *229*

Phonons, atoms and waves: JOHN S REID *233*
The scattering of gas atoms from solid surfaces: ALAN J WALTON *238*
The forbidden volume of a gas: R J E PORKESS *240*
Misconceptions in school thermodynamics: A H JOHNSTONE, J J MACDONALD and G WEBB *248*
Celestial navigation with the stereographic projection: D R HUTTON *251*
A problem in relative motion: JACOB NEUBERGER *255*
A new naturalistic style of mathematics: C P ORMELL *257*
The use of quartiles in teaching error estimation: L M BROWN *261*
An item bank for multiple-choice questions: C J CHELU and L R B ELTON *263*
Leader, News and comment *205* Letters *208* Physics apparatus *212* Notes on experiments *244* Queries in physics *254* Film reviews *267* Book reviews *267* Forthcoming conferences and courses *268*

July 1977

Amount of substance and the mole: M L MCGLASHAN *276*
Introduction to the mole in the teaching of ideal and real gases: P M WHELAN *279*
The place and importance of the mole in school chemistry courses: R T ALLSOP *285*
Fundamental physical constants and the SI base units: B W PETLEY *289*
A physics field course in the Lake District: C A WATKINS *296*
Stokes' law revisited: E M WRAY *300*
The interface between school and university: R A SUTTON *304*
A misinterpretation of Bernoulli's theorem: DONALD BEDFORD and RAYMOND LINDSAY *311*
Physics and the ear—an outline of the mechanism of hearing: P M HAUGHTON *313*
The variation of viscosity with temperature: P G WRIGHT *323*
The Kelvin–Thomson atom Part 1: The one- to six-electron atoms: ALAN J WALTON *326*
Leader, News and comment *269* Letters *273* Queries in physics *275* Physics apparatus *295* Notes on experiments *318* Film reviews *328* Book reviews *329* Forthcoming conferences and courses *332*

September 1977

Isaac Newton—250th anniversary: P M RATTANSI *339*
A Newtonian miscellany: BRIAN GEE *340*
Gravitation as Newton first saw it: BRIAN GEE *347*
Newton, particles and concepts of force: JOAN L HAWES *351*
Newton's telescope: GEOFFREY CANTOR *354*
Resources for Newtonian studies: BRIAN GEE *356*
Simple gravitation using a programmable pocket calculator: R F PHILLIPS *360*
Teacher-based assessment of practical work in sixth-form physics: M B C DYNAN and R F KEMPA *364*
The Kelvin–Thomson atom Part 2: The many-electron atoms: ALAN J WALTON *370*
Thermoelectric effects and contact potentials: R G CHAMBERS *374*
Experiments on water drop interactions: S G JENNINGS *381*
The use of mnemonics in mathematics and physics: W GOUGH *385*
Numerical solution of the Schrödinger equation for a quantum harmonic oscillator: M K SUMMERS *387*
A 'do-it-yourself' demonstration laboratory: PATRICIA CRYER and J G RIDER *389*
Leader *333* News and comment *334* Letters *337* Queries in physics *338* Film reviews *393* Book reviews *394* Forthcoming conferences and courses *396*

November 1977

A review of chart recorders for use in schools: D T RADFORD *404*
Multifunctional digital instruments: J G ROGERS *411*
D.c. amplifiers and their use in the laboratory: M J TEBBUTT *414*
Some books for practical physics: R D MASTERTON *419*
Programmable calculators for elementary physics teaching: RICHARD BEARE and PETER J NEW *424*
Teaching natural philosophy 175 years ago: JOHN S REID *427*
A role for the academic in library instruction: STEPHEN RAWLINSON *432*
The romance of space: BRIAN DAVIES *438*
Development of physics concepts under zero-gravity conditions: POUL THOMSEN *441*
Astrodynamics: A E ROY *445*
The fundamental interactions of matter: D F FALLA *452*
Leader *397* News and comment *398* Letters *400* Queries in physics *410* Physics apparatus *433* Notes on experiments *434* Book reviews *457* Forthcoming conferences and courses *460*
